

Our company has set fiscal year 2018/19 as the base year and we are now working towards achieving “Green Operation 100” by 2038.

In fiscal year 2023/24, we achieved an 8.0% reduction compared to the target of 11% reduction (compared to fiscal 2018).

The target was missed due to an increase in emissions equivalent to 4% as a result of EU policy. However, if the impact had not been taken into account, we would have achieved a 12% reduction.

In order to achieve the target, our company has set not only CO2 reduction targets but also energy-saving targets that will achieve them. We have also set indicators that enable us to evaluate our steady reduction activities despite production fluctuations caused by external factors, and we are monitoring progress globally.

In fiscal year 2023/24, the CO2 reduction rate through our energy-saving activities was 23.7% (calculated based on our company standards), achieving a record high energy efficiency.
